

The Essential Guide to CRM

An illustration of a man in a black suit and red shirt running to the right. He is wearing a yellow and red rocket pack on his back. The background is a bright blue sky with white clouds. A red line with arrows points upwards and to the right, following the path of the runner. A grey arrow points downwards and to the right, following the path of the runner's shadow.

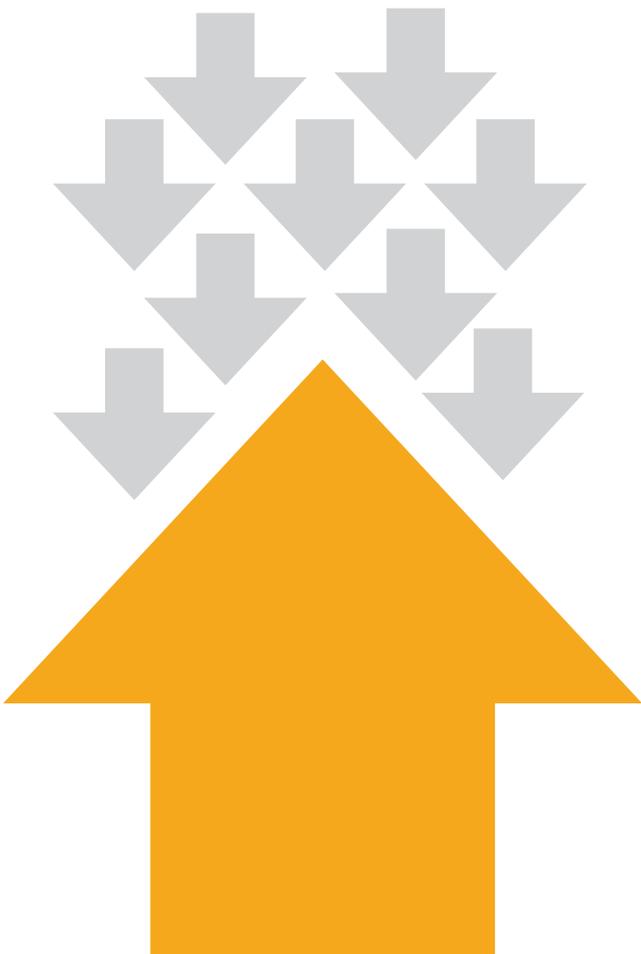

Customers decide your fate. The right CRM solution can help you deliver great and lasting relationships. Here's what to look for.

Note to Reader

If you're satisfied with the status quo, read no further. This guide is not for you.

However, if you have an appetite for shaking things up and trying new approaches to old challenges, you'll want to keep reading. Why? Because this guide will inspire you to take a fresh look at ways to supercharge your sales and marketing teams — and your business — by transforming your Customer Relationship Management (CRM).

It's no secret that digital transformation is disrupting the way businesses interact with their customers. The upside is that these disruptions provide new opportunities to rethink time-worn processes.

What's the secret? No secret, really, just connecting the dots — and the data. By linking disparate sources of data across the business, you can get a clear and comprehensive view of customer activities. The insights you gain from this view will help everyone from salespeople to call-center reps deliver consistently great experiences with every customer interaction.

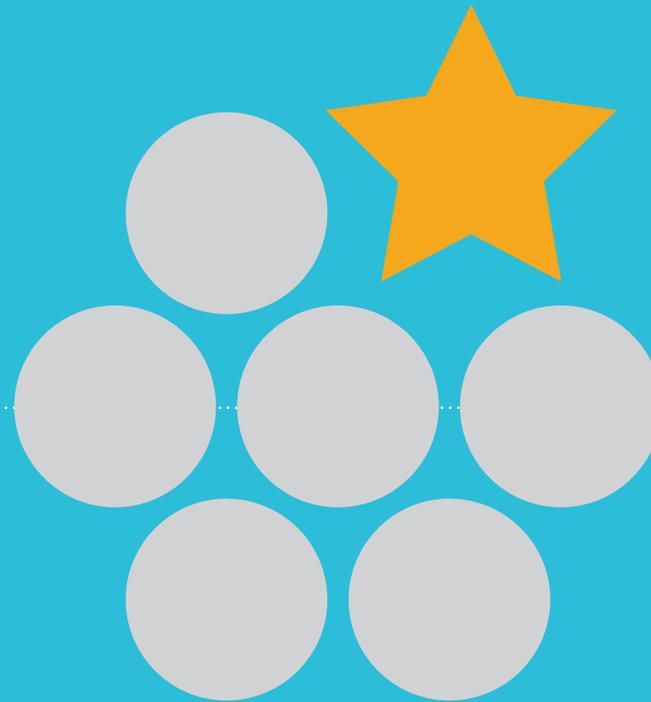

The foundational tool for superior customer experience is your CRM system.

The challenge, historically, is that the people who stand to benefit most from CRM either can't or won't use it, because traditional CRM systems can be overly complex and very user unfriendly.

But modern CRM has come a long way — and it's time to take a fresh look at what it can do for your business. The best CRM solutions are easy to use, yet comprehensive in scope — turning every employee into a customer expert by putting the right information at their fingertips, often before they even ask for it.

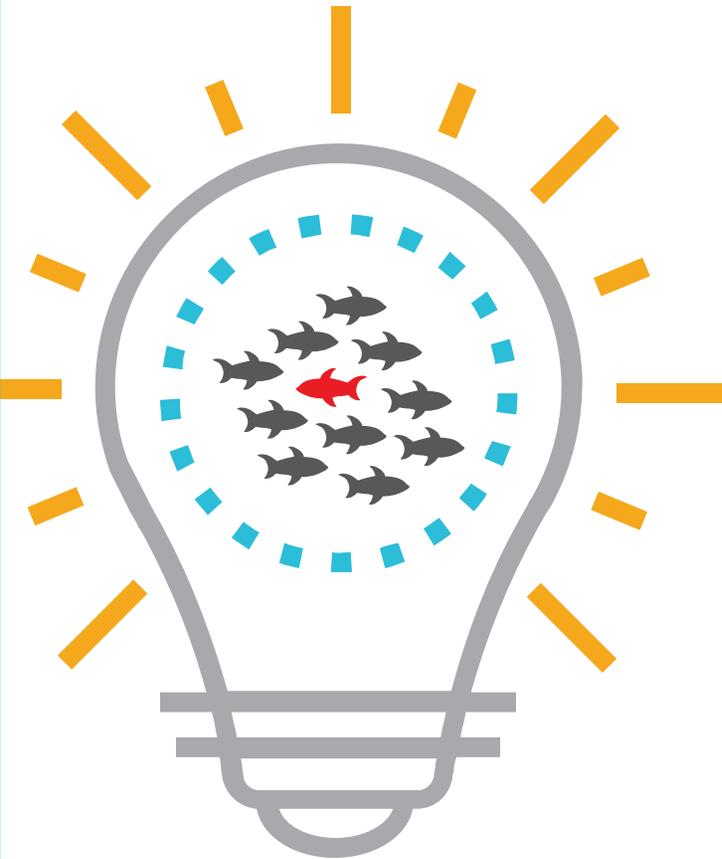

For this guide, we have spoken with top industry experts and forward-thinking business leaders to capture their insights about the challenges of traditional CRM deployments and the keys to a successful implementation. We've included the questions to ask when evaluating solutions and some tips for getting started on the path to modern, game-changing CRM.

CHAPTER 2

CRM:

**The Competitive
Differentiator**

Sameness is the enemy of success. Setting your business apart from your competition begins with better customer experiences.

[McKinsey research](#) found that leaders in customer experience can grow revenues by 5% to 10% within two or three years. In a recent Gartner survey, 89% of leaders at consumer-facing companies said customer experience is their primary differentiator. There's a dark side as well: another [survey](#) found that 25% of customers will defect after just one bad experience.

How can you win when your customers expect top-tier service and seamless transactions, and alternatives to your offer are just a click away? Success comes from providing a customer experience that is consistently better than your competitors' at every touchpoint. You do that through a deep understanding of customers' needs as they research, evaluate, shop for, buy, and use your product or service.

Forward-thinking business leaders — we call them [Game Changers](#) — are making this customer journey the focal point of operations. They are shifting organizational culture to adopt a customer-centric focus meant to break down silos across functional groups and encourage new thinking around customer needs.

CRM has emerged as the enabling platform for this customer-first transformation. Its role as a great differentiator is quite a leap from its more modest beginnings.

"CRM, when it first started, was more about keeping your contacts in a central location," says Brent Leary, Cofounder and Partner of CRM Essentials, a CRM consultancy. "Today, CRM is the foundational component of a customer engagement strategy."

A modern CRM solution will help you capture relevant insights about your customers and, as importantly, share those insights with the employees who can act on them to deliver positive experiences. Today's CRM systems also can drive significant improvements in productivity and open up new opportunities for business growth. Some game changers, such as Jim Glickman, chief marketing officer at Hilco Valuation Services, have turned CRM into a platform that supports their entire business.

“ CRM, when it first started, was more about keeping your contacts in a central location. Today, CRM is the foundational component of a customer engagement strategy. ”

— Brent Leary, CRM Essentials

“Unlike other companies that use CRM to track companies and contacts, we use it as our sole operating platform,” says Glickman. “Salespeople use it as a CRM tool. Business operations staff use it to book deals. Appraisers use it to assign tasks and track time and expenses. We do all of our business reporting from the system.” Glickman’s team even gave the platform a name that speaks to its breadth: ESSTER (Engagement, Setup, Scheduling, Tracking, Evaluation, and Reporting).

If you’ve had enough of settling for ordinary, a fresh approach to CRM can unleash the type of game-changing customer engagement that drives loyalty and fuels business growth.

CHAPTER 3

Why Your Business Needs Great CRM

Technology has become the great equalizer, because it has put tremendous control in the hands of consumers and business buyers alike. Thanks to digital disruptors such as Amazon and Netflix, buyers expect you to know them, regardless of whether you're selling books, enterprise software, or farm equipment. Seamless transactions across devices and 24/7 access are the new norms across industries, and recommendation engines are leading even B2B buyers toward next purchases.

It's no longer enough to provide the best product or service, because many prospects won't ever become customers if they're turned off by the experience of getting to know you. You need to deliver a great first impression and repeat that performance with consistency and excellence at every stage.

"It's less important that you have a 360-degree view of the customer and more important that the customer has a 360-degree view of you," says Rebecca Wettemann, VP of Research at Nucleus Research. "Whether they touch sales, marketing, or service, customers need to get the same answer, the same tone, the same interaction."

CRM was *supposed* to deliver those types of sparkling results, but the first few generations of CRM technology fell short. Blame it on siloed data, convoluted processes, ineffective tools, or a status-quo culture. Some studies peg CRM failure rates at 60% or higher, and anecdotally, we know that many users simply don't like their CRM systems, because the technology is too difficult to use or doesn't help them do their jobs better.

When a business tries to go to battle with an underperforming CRM system, the results can be devastating. "More often than not, employees in one department don't even know the employees in other departments, let alone use data that spans the organization," wrote customer experience futurist Blake Morgan in [Harvard Business Review](#). "This often results in wildly inconsistent customer experiences that make companies look disconnected and unfocused."

[McKinsey reports](#) that less than 40% of companies say they are even moderately effective at using digital sales tools and capabilities. That speaks not just to the technology, but to the culture as well, as it may signal a lack of commitment to provide the training and support needed to master these tools.

“It’s less important that you have a 360-degree view of the customer and more important that the customer has a 360-degree view of you.”

— Rebecca Wettemann, Nucleus Research

From ‘Good’ to Great CRM

Increased competition and more discerning customers put more pressure on businesses to get more out of their CRM system — and quickly. CRM technology has evolved to the point where it’s delivering clear value to the top line, in the form of increased revenue, and the bottom line, stemming from increased productivity and more efficient workflows.

That translates to better return on investment (ROI). Nucleus Research found that companies investing in CRM increased average returns by 1.5 times between 2011 and 2014, from \$5.60 to \$8.71 in returns per dollar spent, and that trend has continued. [In a 2017 survey by CITE Research](#), sales professionals said CRM was the most used and the most valuable tool in their technology arsenal.

Wettemann says she’s seen a distinct change over the past couple of years in CRM’s effectiveness at driving greater productivity across sales, marketing, and service functions. “We see that playing out in two ways,” she says. “It’s adding to the top line, by making sales more productive, and it’s cutting the bottom line, by automating more tasks and enabling companies to do more with fewer resources.”

Top-Line Benefits

Many businesses are finding it easier to draw a straight line between CRM use and revenue growth. More effective lead scoring tools and lead nurturing tools improve the quality of prospects that marketing passes to sales. Automated workflows and built-in analytics provide precise insight and action prompts, helping to boost conversion rates by providing the right touch at the right time.

CRM can also improve repeat business by providing sales, marketing, and customer service teams with a more comprehensive customer view that helps them create and execute an end-to-end engagement strategy. Hilco Valuation’s CRM system, for example, has helped the company grow its renewal business by 15% to 20% per year without bringing on additional resources, according to Glickman.

“CRM is now at the forefront of making you more effective in building relationships.”

— Brent Leary, CRM Essentials

“CRM is now at the forefront of making you more effective in building relationships,” says Leary. “The ability to use information and insights should help you to get the attention and keep the attention of people you are trying to do business with, based on having a better understanding of what they are interested in and what their challenges are, and having those insights in real time.”

Bottom-Line Benefits

Advances in workflow automation and the ability to integrate multiple data sources have had a significant impact on CRM’s ability to improve collaboration and productivity – instead of inhibiting it, as past iterations were known for.

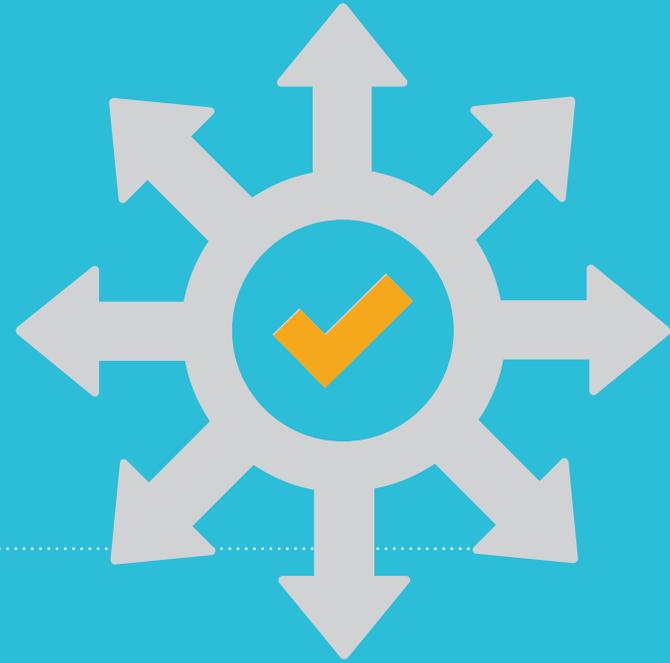

“A system that automates data collection and analysis allows you to spend less time doing things like data input, data upkeep, and searching for information,” says Leary.

Efficiencies can be found across the business:

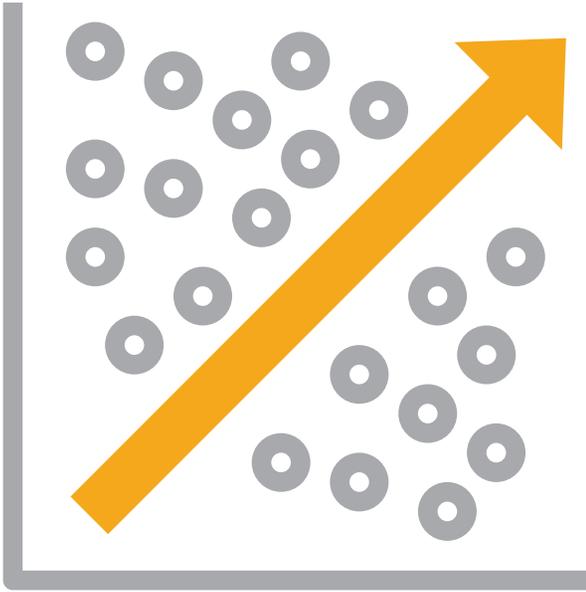

- Contact center agents can resolve issues with higher satisfaction in less time, with the help of advanced workflow capabilities that provide intelligence and context for each customer interaction.
- For marketers, automated campaign management and lead scoring can reduce manual processes while improving performance.
- IT and administrators benefit from simpler, effective workflow automation. With more advanced visual design tools, developers build more inclusive workflows that require less maintenance. Automation of key associated tasks can ensure that proper pre- and-post sale activities, such as onboarding, are completed quickly to optimize the customer experience.
- Finance teams can use CRM to track and manage payment processes, for example, by tracking against date fields and flagging an account when a payment is missed.

For all of these reasons, it should be clear why your business needs great CRM.

CHAPTER 4

Demystifying CRM Technology

Once thought of as a functional repository for customer data, CRM has become capable enough to take on a much broader role in business operations. “I don’t even think of it as CRM,” says Glickman, who championed the CRM implementation at Hilco Valuation that went live in 2012. “We look at this more as kind of a comprehensive business platform.”

The Hilco deployment bears little resemblance to most legacy CRM systems. But many other businesses have come to rely on the technology as “a proactive piece of the customer engagement strategy,” says Leary. “It’s still good to have a central location for customer data, but now it’s more about having a system that automates data collection, automates analysis, and automates finding insights.”

An end-to-end CRM system is more platform than solution. It is extensible and supports a variety of different tools and technologies as part of a broader customer engagement ecosystem. Because the breadth of options and extensions can be overwhelming when shopping for a CRM solution, consider your needs relative to four critical areas.

1. Intuitive User Experience

The biggest challenge with many CRM deployments is user adoption. If it’s not easy to use, if it doesn’t help employees do their jobs better, and if it makes tasks more complex instead of easier to complete, then people won’t use it.

Modern CRM, therefore, puts a premium on a streamlined, consumer-grade interface. “It’s important to simplify the focus, to put just the information in front of the user that they need to make the most effective decision or to make the next best action,” says Wettemann.

To do that, you need a CRM solution that lets you define how different users interact with the system. Creating different user types and roles should be simple, allowing users to see only the information that’s relevant to them for the activity they’re engaged in. Insights should be delivered visually wherever possible to help users conceptualize information and act decisively. And the intuitive interface must extend across desktop and mobile devices, so that field agents and mobile workers get the same experience regardless of device or location.

“I don’t even think of it as CRM. We look at this more as kind of a comprehensive business platform.”

— Jim Glickman, Hilco Valuation Services

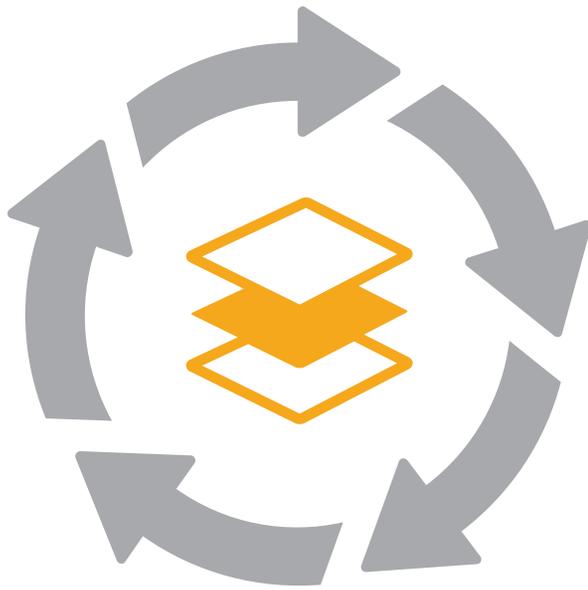

“The user interface has become mission-critical, even though you might not think of it as an ordinary part of CRM selection,” says Paul Greenberg, Managing Principal of The 56 Group and author of *CRM at the Speed of Light*.

The user experience should improve further as vendors add artificial intelligence (AI) capabilities into their products. “You want a system that is so intuitive that end users don’t require training to use it,” says Wettemann. “We’re certainly seeing a move in that direction.”

2. Workflow Automation

A modern CRM platform must excel at workflow management, automating processes wherever possible. Businesses can use advanced automation to enforce best practices, improve productivity, and reduce costs. Intelligent workflow can deliver excellent value across the organization in areas such as:

- **Intelligent call routing:** Sales and service run more effectively when the CRM system leverages a business rules engine and advanced workflow to enable seamless handoffs and smart escalations — for example, routing calls to in-house product experts outside the support center.
- **Predictable cash flow:** Managers can model sales revenue and build forecasting dashboards that enable executives to track progress against projections. The system can also create payment tracking mechanisms as part of customer lifecycle management and send alerts regarding payments at risk.
- **SLA compliance:** A process-oriented CRM can help guide the entire service resolution lifecycle and apply automated SLA management. For example, high-priority customer issues can be intelligently routed, and the system can send alerts whenever threshold values for action are exceeded.

3. Process Alignment

Businesses use CRM as a platform to align business processes across the entire organization, including:

- **Contract management:** Speed up time-to-close with modules that access customer data for contract creation. The system can manage contracts through both the sales cycle and the customer lifecycle.
- **Order management:** Automate workflow in the post-sale process and ensure customers get what they've purchased. In this way, the CRM promotes reliable transitions among sales, fulfillment, billing, and payment.
- **Service delivery:** A CRM-enabled customer support hub can automate the process around post-sale delivery, installation, and other services.
- **Claims processing:** Manage the tracking of customer claims, returns, and refunds, integrated with financial systems.
- **Purchase request management:** Enable intelligent purchase order creation, ensure timely alerts, and enforce parameters around purchasing activities.

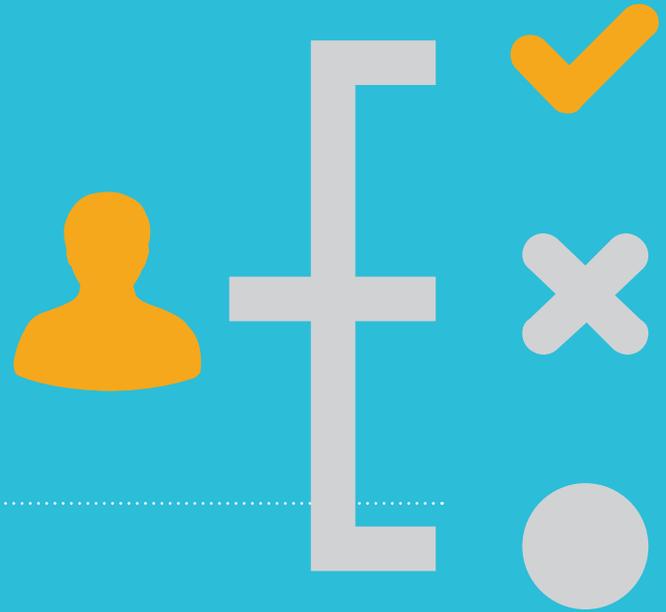

4. Platform

Today's CRM solutions are typically cloud-based, but some vendors offer hybrid hosting options and freedom of choice on cloud storage. Code bases vary by vendor. Some solutions are built with proprietary code, while others use open standards.

Code choices can dramatically affect flexibility and total cost of ownership. If the full source code is available and common languages are used consistently throughout, you can customize without specialized coding expertise.

With no barriers to development, business can leverage the power of the CRM in all situations. Not only can you optimize your standard interfaces affordably, you can create "disposable apps" that can be fired up for one-off events such as trade shows or new product launches.

CHAPTER 5

CRM Evaluation Checklist: Focusing on the Features that Matter

A great CRM system serves as the key that unlocks superior customer experience by tying your business together. When you look closely at various solutions, you'll find important differences in features and functionality. This checklist will help you ask the right questions to narrow down your choice.

Core CRM features:

SALES AUTOMATION:

- What built-in capabilities does this solution provide for sales acceleration?
- Does the solution auto-populate records and forms?
- Can it ensure that contact data is accurate?
- How does the solution drive sales productivity? Can it automate the delivery of information about companies and influencers in its dashboards?

LEAD MANAGEMENT:

- Does the solution come with functionality to automate prospect outreach and lead qualification?
- What capabilities does it include for lead nurturing?

CASE MANAGEMENT AND SELF-SERVICE:

- Does the solution deliver a comprehensive customer record to call center agents that includes data from the sales department?
- Does the solution automate call and email routing to support prioritization and reduce wait times?

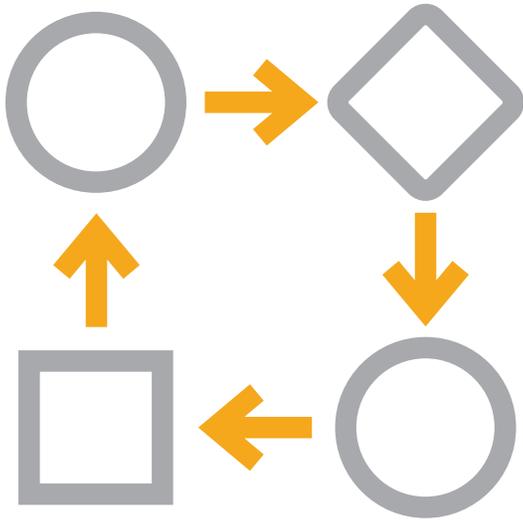

Other features and functionality:

WORKFLOW AUTOMATION:

- Does the solution automate workflows?
- Does the automation support the entire customer journey, from acquisition to advocacy?
- Does the solution offer automated call logging?
- What skills do we need to customize workflows?

INTEGRATION (APPLICATIONS AND DATA SOURCES):

- How does this solution integrate with applications and data sources?
- What integration capabilities are built-in?

USABILITY/UX:

- Is the default user interface consumer-grade?
- What work is involved in customizing an interface?
- How consistent are the desktop and mobile interfaces?
- Does the solution include offline mobile capabilities?

RELATIONSHIP INTELLIGENCE:

- Will the solution help us to accelerate call preparation time by providing associates with all the customer contact and social network information they need with just a name and an email?
- Will the solution enable us to spend less time on research and maintenance so that we can spend more time getting to know our customers?

Platform requirements:

CUSTOMIZATION AND EXTENSION PLATFORM:

- How is the platform optimized for extensibility and customization?

CODE BASE/SOURCE CODE ACCESS:

- Does the solution provide access to the full source code?
- Is the code base consistent across all modules?
- Is the solution written in a proprietary language?
- What expertise and tools will we need to customize the solution?

APPLICATION HOSTING:

- What are the options for hosting the application?
- Can we choose where our data is stored?
- Is there any charge for using local storage or a public cloud?
- Is there a charge if we choose to relocate our data?

SINGLE- OR MULTI-TENANT SOFTWARE:

- Do we have control of our own application version?
- Do we schedule our own updates, or does the vendor set the migration schedule?

Security and compliance:

- Can this solution meet our data security and privacy requirements?
- Does this solution enable us to meet our regulatory and compliance requirements?
- Does this solution provide the governance tools we need?

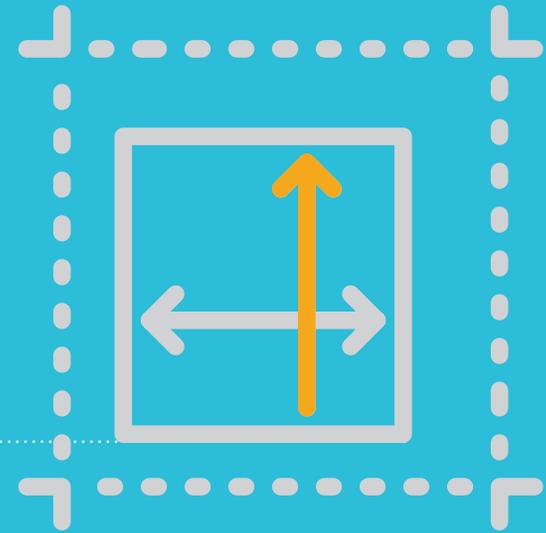

Pricing/Total cost of ownership (TCO):

- What are the pricing models and levels?
- Are there any upcharges, additional product charges, server license charges, or maintenance charges?
- What other charges and fees might we incur over the lifetime of this solution?
- Are there charges for usage above preset limits and for storage of files?
- Are there charges for integrating applications and data sources?
- Are there limits on API calls?

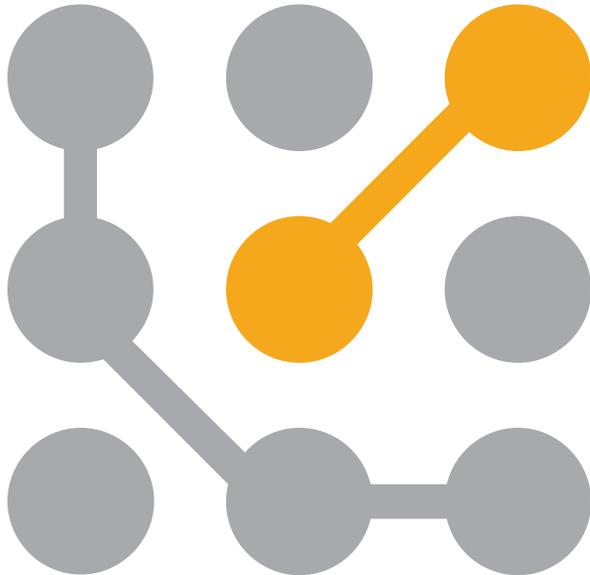

Vendor requirements:

- What type of customer support is included with the solution? Do they offer extended, phone-based technical support packages?
- Do they provide a knowledge base, case portal, or other online resources?
- How broad/deep is their ecosystem? Are they part of a wider network of deployment partners?
- Do they offer packaged connectors to critical features?

CHAPTER 6

A Blueprint for CRM Success

CRM success starts well before the technology purchase. It's important to begin with a blueprint encompassing business alignment, team building, and change management. These foundational elements will help to ensure maximum adoption and business benefit from your CRM solution.

"When it comes to choosing a CRM system, you have to get your objectives in place," says Greenberg. "What do we want to do? What is the strategy? How do we want to go about executing? If you don't have those questions answered up front, the buying decision is going to be based off of old information or maybe no concrete information at all."

Leary agrees that companies sometimes venture into CRM projects without enough reflection. "Price and implementation are important," he says, "but it starts by asking, 'Why are we doing this in the first place? And what processes do we need in place in order to make sure that the outcome we're going to get is the one we want?'"

Start at the Top

Leadership input is vital in a CRM deployment or expansion. Charlie Brown, CEO and founder of Context Partners, explains in [Harvard Business Review](#):

"Because it involves software, many companies make it the CTO's responsibility. But relationship management also depends on policy, incentive structures and people. In the brand-driven environment of modern commerce, no strategy impacts your business more than how relationships are managed, inside and outside the organization, and that's an executive role if ever there was one."

It's important, therefore, to avoid the legacy CRM trap of fixating on management and process efficiency, and focus instead on the customer lifetime value that could accrue from deeper bonds and increased relevance — and revenue.

Selling the investment to leadership involves defining what success is in terms they can understand. The best business cases, says Wettemann, focus on two or three clearly articulated business benefits, such as shortening the quote-to-cash cycle for sales teams or reducing call resolution times in customer service.

Navigating the Naysayers

How to overcome common objections to a CRM purchase.

OBJECTION

RESPONSE

Can we afford this solution?

We can start small with a per-user subscription model and scale as needed. We'll look for a solution with no hidden fees for maintenance, reporting, or customization. Additionally, in terms of productivity gains and increased sales velocity, not deploying the system now could cost us money in the short and long term.

Our employees hate CRM — it's too complex.

We can build role-specific interfaces that make it easy for users to interact with the system from desktop or mobile devices. They will see an intuitive tool that gives them access to the information they need when it matters most. And the insights we can draw from that data can give them an edge over the competition.

We don't have the skills to do the customization we need for this to work.

Customization is essential to creating a total customer view to empower our engagement strategy. Web services and standardized APIs make it easier to create custom integrations that are uniquely suited to our business needs. Plus, it's better to start small, configuring the system for quick wins, than to be oversold up-front on a bunch of features that we don't need.

We should buy from the CRM market leader — that's the safest choice.

Any vendor, large or small, can terminate development or support of a product at any time. We want to choose a vendor that offers solid protection in case of disaster or prolonged downtime, with the ability to run our CRM software with multiple cloud options — not just access it from a single cloud environment. And think about this: is doing the same thing as everyone else a good way to differentiate ourselves?

Our current solution is fine.

Our current system does not scale and does not allow us to address the changing needs and behaviors of our customers. We need a modern CRM solution to compete and grow. Advanced workflow capabilities are critical to simplifying complex processes. We need to develop mobile strategies and experiences on the fly, something we lack today.

We will lose control of our data with a cloud-based CRM solution.

The market is moving toward a Software-as-a-Service (SaaS) consumption model. We will have the option to select a public cloud or a private cloud deployment. We will also ensure that the software complies with all relevant data security and privacy regulations.

“Just like in politics, you find your evangelists and your champions, and you recruit them.”

— Paul Greenberg, The 56 Group

Engage Everyone Else, Too

CRM planning processes must focus on getting everyone on board. If your organization has a status-quo culture, you could face stiff resistance.

“If you’re at one of these companies where buy-in is difficult, the first thing you have to do is find your champions and recruit them,” says Greenberg. “Just like in politics, you find your evangelists and your champions, and you recruit them.”

Champions connect with key stakeholders across the organization and bring the right people in at the right times throughout planning, evaluation and implementation.

As you expand outreach, identify every department and role that will interact with the system and develop a process for communicating and soliciting feedback. Help stakeholders see what is in it for them. Work to maximize involvement and ownership across departments and user types.

“There is the old adage: Vote early and often, and it holds true when campaigning for changes in work behavior,” says Wettemann. “Getting business users aligned in the beginning of the process — even in the selection of the vendor — is important. Help them understand what’s in it for them from the beginning.”

If you’re saddled with an underperforming CRM — or outdated, labor-intensive processes — achieving buy-in should go more smoothly.

“It was not hard to get people to switch, because everybody was craving something [new],” says Glickman. “We were growing at a pace where if we went along that trajectory for even just a couple more years, we wouldn’t be able to manage our business. So we had a number of people who were pounding the table for it.”

Building the CRM 'A' Team

A successful CRM deployment involves getting buy-in from key stakeholders across the business. These are the things they care about most:

| | | | |
|---|---|--|---|
|  | Sales management | <ul style="list-style-type: none"> ■ Pipeline visibility and management ■ Customer acquisition ■ Sales forecasting | <ul style="list-style-type: none"> ■ Territory management ■ Sales performance management |

CHAPTER 7

Success Metrics: A Checklist

It's essential to define your success metrics for CRM as part of the buying process, because these metrics will help you determine the functionality you will need in order to deliver positive top- or bottom-line results. You want to measure CRM performance with precision for optimal outcomes.

Here's a sampling to get started:

Business Outcomes:

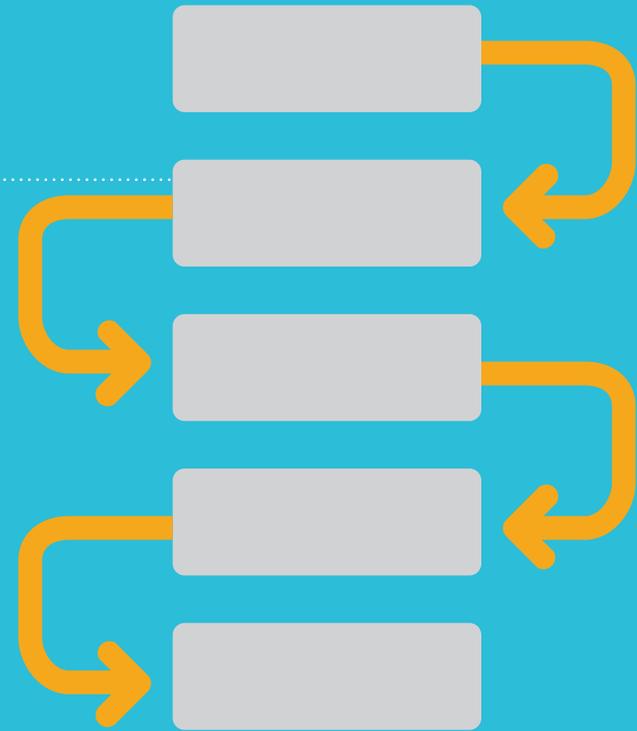

- **Pipeline visibility:** Track whether the CRM system is giving sales teams a comprehensive view of customer or prospect activity to identify new opportunities.
- **Conversion rates:** Track current conversion rates across all defined sales stages to establish baselines on which to benchmark success. Include sales, upsells, and cross-sells in tracking.
- **New business growth:** Track new customer accounts or net new sales by customer.
- **Retention and profit per customer:** The duration and value of customer relationships.
- **Sales performance:** Get as granular as possible with your team's performance, such as average sales cycle, conversion rate by sales rep, or activities across each stage of engagement.
- **SLA compliance:** Manage performance and compliance with service level agreements with your customers.
- **Customer satisfaction:** Set targets for customer satisfaction and measure against those.
- **Customer advocacy/influence:** Track customer sentiment via direct feedback, social media, or metrics such as Net Promoter Score (NPS).
- **Attrition:** Set targets relating to different causes of attrition to determine whether the CRM is delivering expected improvements.

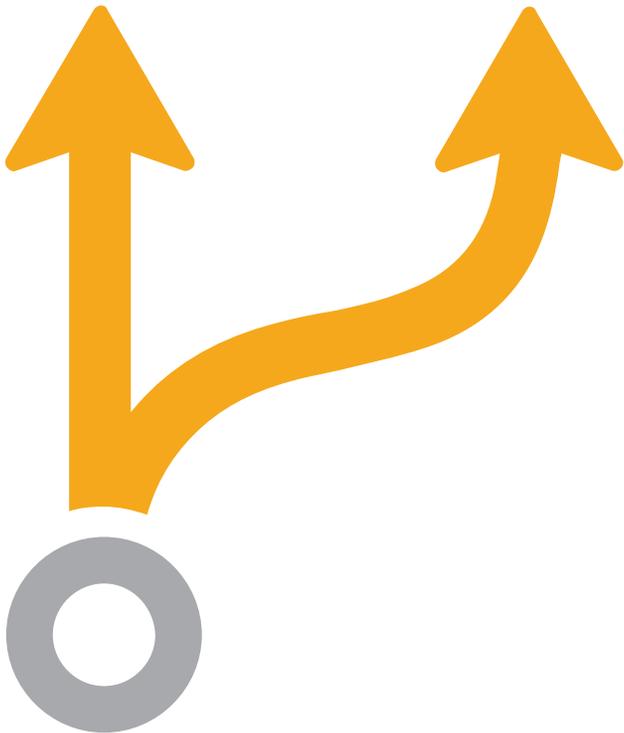

Operational Performance:

- **Usage rate:** A CRM system is only as good as its users. Set adoption and usage goals for each department.
- **Employee satisfaction:** Target and track areas where employees are expected to experience improvements in their work, such as collaboration and depth of insight.
- **Lead quality:** Set standards for lead qualification and opt-outs, and measure the quality of leads that pass to sales via automation.
- **Automated outreach:** When you use CRM to prompt customers based on data signals, measure the performance of those campaigns.
- **Interaction intervals:** Is the CRM helping you keep customer relationships fresh?
- **Speed of response:** Are customer service representatives responding faster with better information?
- **Fulfillment:** Measure whether the CRM is helping you complete post-sales operations faster.
- **Payments:** Use the CRM to follow the customer journey to the end, and apply time-to-payment metrics.
- **TCO:** Set a budget for CRM implementation, maintenance, and growth, and measure against it. Target cost savings related to the CRM deployment and measure for improvements.

CHAPTER 8

Getting Started

“You don’t choose [the technology] and then decide what to do with it. You figure out what you need to do first, then you put in the CRM to enable you to accomplish what you plan on doing.”

— Paul Greenberg, The 56 Group

You’re getting closer to a purchase decision, but you’re not quite ready to buy yet.

“The last thing you do is choose your technology,” says Greenberg. “You don’t choose it and then decide what to do with it. You figure out what you need to do first, then you put in the CRM to enable you to accomplish what you plan on doing.”

1. Plan Your Design/Build/Modify Architecture

In evaluating solutions, teams should inquire about code bases, extension frameworks, and ease of customization. These factors will affect development opportunities and costs.

Greenberg notes that no CRM solution can do everything out of the box. “The question is: How much can it do?” he asks. When the HVAC manufacturer York was evaluating CRM solutions, it identified 250 business processes that the business used consistently. “One of their tests was how much of what they needed could each solution do — out of the box, without customization? It’s a fairly simple test,” Greenberg says.

CRM customization focuses largely on building workflows, integrating applications and data sources, and refining user interfaces. Project teams should map the organization’s business processes against the CRM solutions during evaluation to determine the scope of customization needs.

“We wanted the technology to mirror our processes and not have the process mirror the technology.”

— Jim Glickman, Hilco Valuation Services

Hilco Valuation's CRM system is highly customized, because of its broad use across business operations. “We spent a lot of time upfront before we developed even one line of code understanding what our business process is and what it could be,” says Glickman. “We wanted the technology to mirror our processes and not have the process mirror the technology.”

2. Map Your Business Processes

To be effective, your CRM system must map closely to mission-critical business processes.

“Where CRM has failed is where the business doesn't make it a critical part of the process,” says Glickman. “If you put CRM off to the side, where it's not really required, that's a recipe for failure.”

In addition to identifying essential processes that the CRM system will manage, use the CRM deployment as an opportunity to fix processes that don't work well. A CRM solution can help optimize customer-facing processes end-to-end, but it can't fix broken ones on its own.

“You shouldn't just be paving over the old cow path,” says Wettemann. “If you're implementing a new CRM solution, you should be looking to see how you can automate and streamline to make processes better, rather than just coding what you have already done.”

3. Map the Customer Journey

Game changers view their business through the customer's eyes. Planning should include an agreed-upon definition of the optimal customer experience. A comprehensive customer journey map — developed from the customer's perspective — will help you to identify gaps and opportunities to re-work existing processes and add new workflows.

By mapping the customer journey in detail, the project team gains a rich understanding of customer needs, preferences, and behaviors at every stage. Next, align those preferences and activities with your customer-facing processes, which will help you to identify areas in need of improvement and ensure consistent handoffs of the customer record along the journey.

“If you’re implementing a new CRM solution, you should be looking to see how you can automate and streamline to make processes better, rather than just coding what you have already done.”

— Rebecca Wettemann, Nucleus Research

4. Prioritize Opportunities

Work with department heads to develop revenue and productivity opportunities at every stage. Once opportunities are flagged, study them for the ROI potential, compare them, and prioritize CRM expansion accordingly. For example, if accounting can receive payments faster by gaining access to sales data, you can designate deployment there as a high priority.

Look for potential efficiencies beyond the core sales/service/marketing functions. Plan to leverage CRM automation to ensure timely revenue flow and replace inefficient processes throughout the customer lifecycle.

5. Align Sales and Marketing

Sales acceleration is one of the leading benefits of CRM. In a recent [B2B Technology Marketing Community survey](#), 61% of marketing executives said lead quality was their No. 1 barrier to success.

It’s important, therefore, to align sales and marketing around lead qualification definitions. With these definitions in place, the CRM system can help you to reduce pipeline waste by automating certain lead scoring and tracking activities.

6. Define the User Experience

Work with department heads and front-line workers to discover the insights, prompts and functionality that they need based on their role. A CRM system can integrate endless functionality and data across sales and service functions, so the project team must guard against overloading users.

Users should have an intuitive interface that delivers only the data that is most relevant to their roles and the specific customer moment. Performance should be consistent between desktop and mobile experiences.

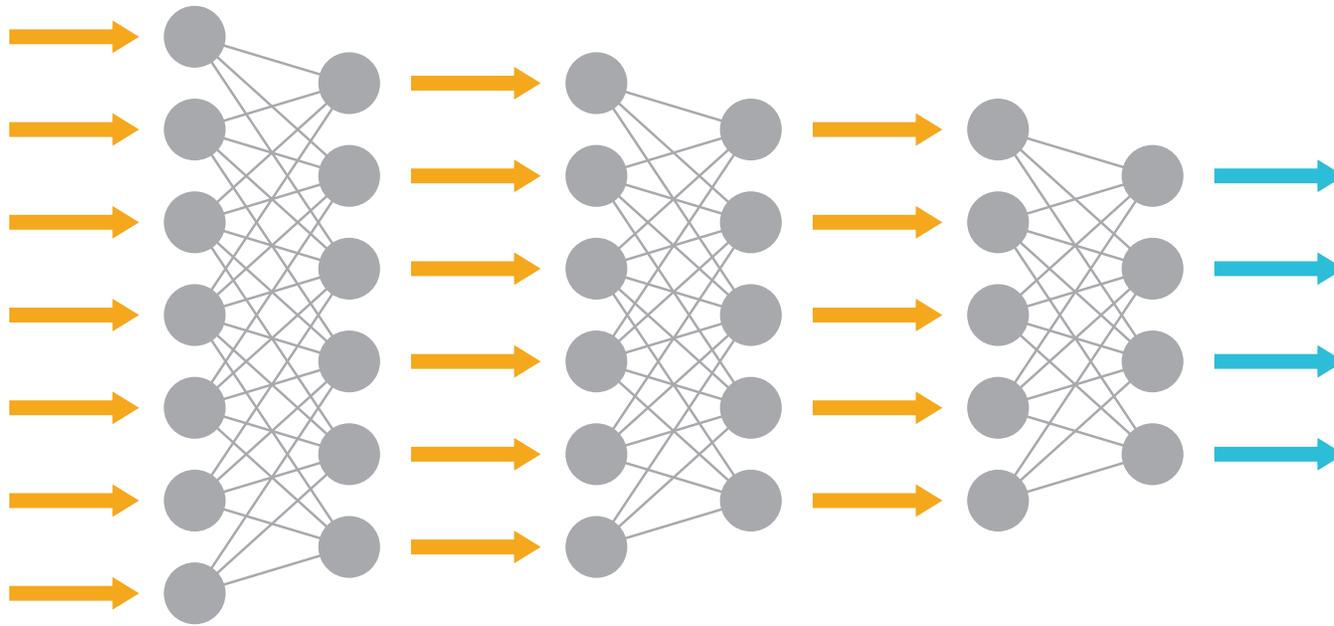

To ensure productive CRM usage, build coaching into the dashboards. “We are seeing solutions that are more usable and allow for less training for users to be productive with the application,” says Wettemann.

7. Determine Which Applications and Data Sources to Integrate

Determine what applications and data sources are needed to empower users and maximize workflow efficiency. Nucleus has found that edge applications (such as configure price and quote (CPQ) tools, field service, or contract management), integrated into a CRM can deliver more than four times the ROI of core CRM core applications like sales automation, marketing automation, and service automation, according to Wettemann.

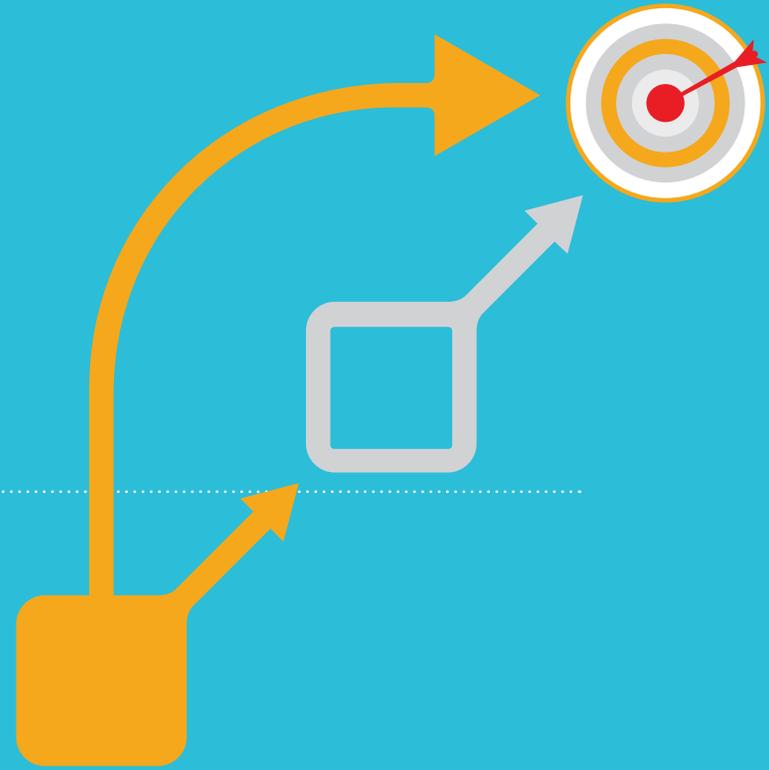

Users also need to trust the data. Consider developing a master data strategy in parallel with the CRM project to maximize data quality.

Data governance also is a key consideration of any data integration strategy. Prepare a requirements list so you can uncover any potential issues around how you manage customer information related to security, privacy, or compliance.

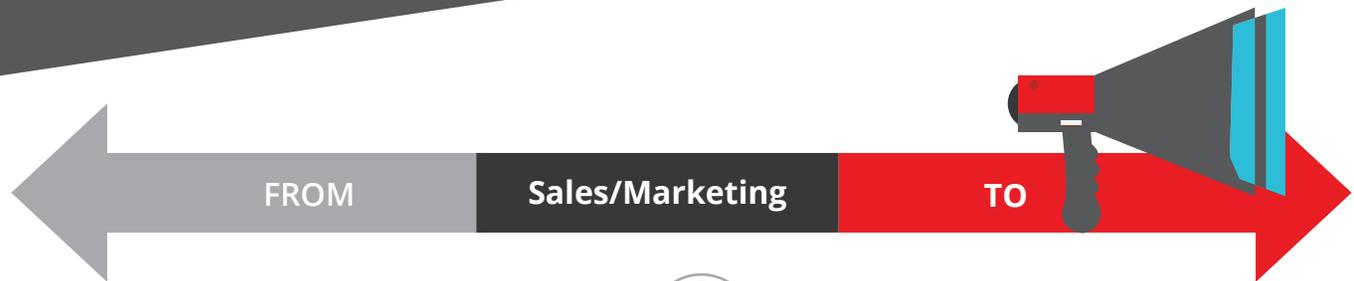

CHAPTER 9

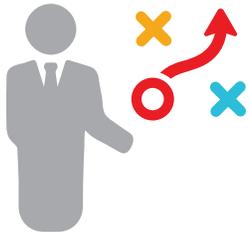

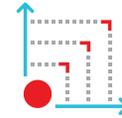

CRM's Ideal State

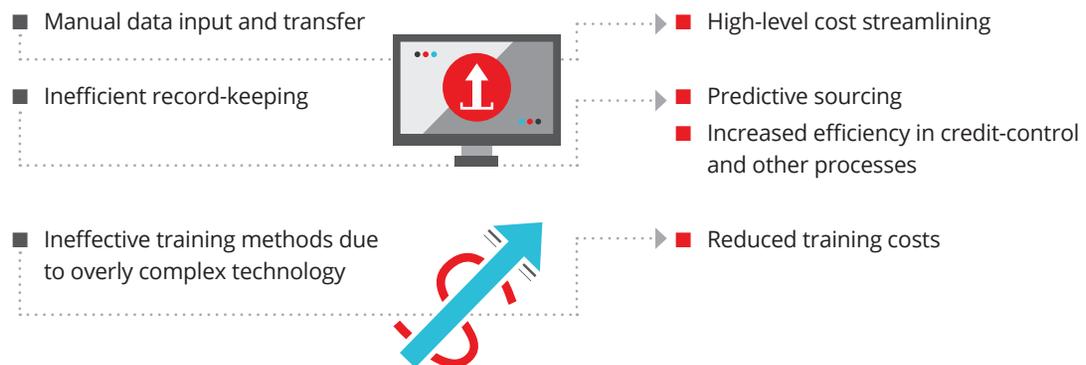

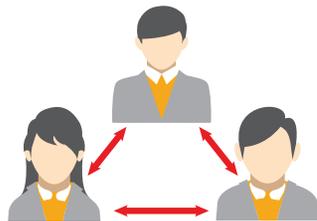

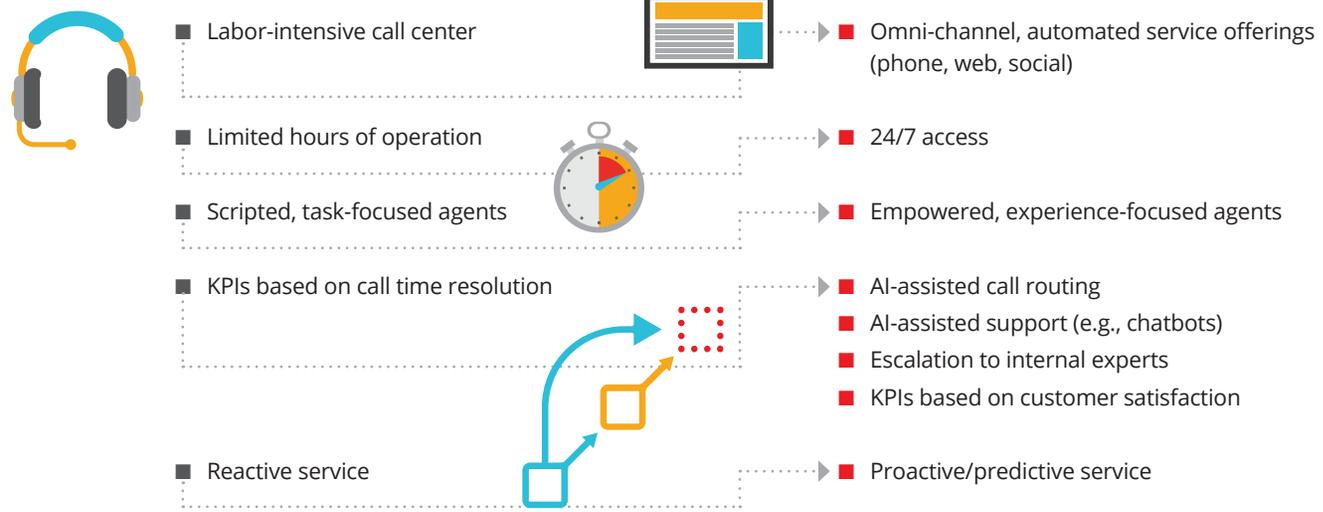

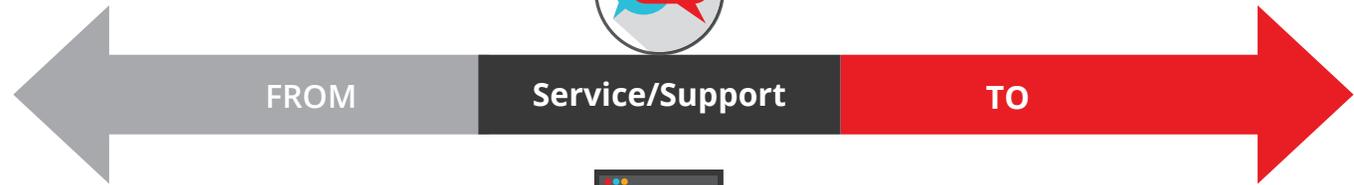

Key Steps Toward CRM Maturity

- Company-defined processes → ■ Customer-defined processes
- Static workflows → ■ Dynamic, automated workflows
- Segmented customer information, resulting in disparate, sometimes conflicting data → ■ Integrated data sources enabling end-to-end customer view and better pipeline visibility
- Standalone tools for tracking prospects, pipeline activity → ■ Predictive analytics for more accurate forecasting
- Historical reporting → ■ Predictive reporting
- Inaccurate forecasts → ■ Full customer lifecycle management
- Labor-intensive data input

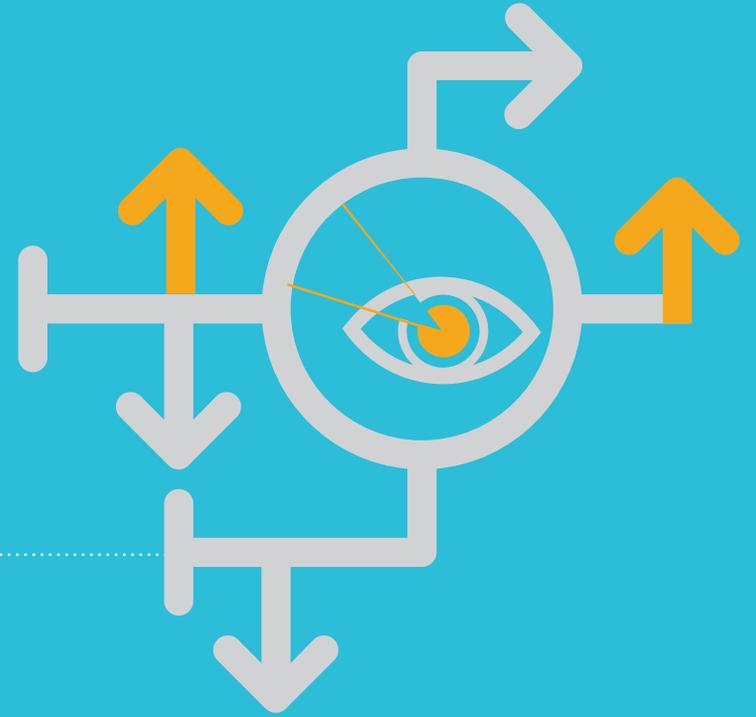

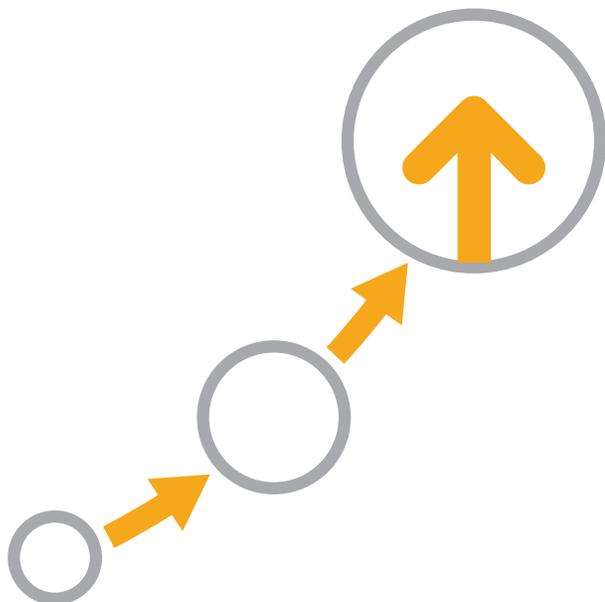

- Disjointed view of customers → ■ Executive dashboard that shows real-time performance and trends
- Gut-feel decision-making → ■ Data-driven decision making
- Reactive to market shifts → ■ Proactive approach to new markets, new customer segments, R&D
- Compliance risks created by poor data management practices → ■ Reduction in new hires due to automation
- Reduced risk

CHAPTER 10

The Future of CRM

Your business doesn't stand still, and neither should your CRM system. A CRM solution should put you on a path of continuous improvement, with the most exciting advances in key areas such as mobile and artificial intelligence. The future of CRM is about fine-tuning the ability to deliver the right information to the right user at the right time — even if they don't ask for it.

"There's so much information out there that using technology to bring that needle in a haystack to the CRM user is going to become increasingly important for an increasingly competitive world," says Wettemann.

Better Mobile Capabilities

Optimizing CRM for mobile devices is a critical focus, as sales teams and entire workforces spend more and more of their working hours on their smartphones or tablets. The emphasis going forward is to deliver better insight and functionality to the small screen.

"Several years ago, we looked at mobile apps for salespeople and found that mobile CRM gave them roughly a 12% increase in productivity," says Wettemann. "That number is only growing as the applications get better and mobile use becomes more ubiquitous."

Improving mobile CRM functionality is a priority at Hilco Valuation Services. "We would like to take a lot of the work that happens in this office and move it into the field," says Glickman. Traditionally, appraisers in the field hand-wrote or dictated notes, then brought them back to the office where they were entered into the CRM system. "We're moving the responsibility for the point of capture from here to the field," Glickman explains.

Relationship Intelligence

Even more promising for the future of CRM is artificial intelligence, or AI. A recent Gartner report calls AI a "force multiplier for workers who ease the relationships between customers and organizations." Gartner found that many organizations plan to link AI to customer engagement applications, call center service and support, and digital marketing practices.

“People are interacting with [virtual assistants] in ways you could not have imagined even a few years ago. It’s going to have a huge impact on customer engagement and the foundation that CRM sits on.”

— Brent Leary, CRM Essentials

As CRM systems become more adept at consuming large amounts of data, and leverage machine learning algorithms to generate insights more quickly, they will allow every user to better know every customer, and to anticipate and predict customers’ needs more effectively.

Collecting a variety of unstructured data, including social media posts, emails, and call center recordings, and combining this behavioral data with transactional data, CRM systems will be able to deliver deeper insights on customer preferences, which deepens the customer relationship. Social data in particular can help an organization learn from and engage with customers at a more holistic level.

In effect, machine learning will turn CRM into an indispensable “robot assistant” that not only makes the user more efficient and effective at getting the job done but tells them things they don’t already know about their customers.

“We’ll see more embedded AI as personal digital assistants for every user,” says Wettemann. Early returns are promising: in some of its early research around social selling, Nucleus has seen productivity increases in the double digits for salespeople, “simply because of the ability to pull all that information together, put it in the right place, and show them not just what to do, but how to do it,” Wettemann explains.

Finding the Meaning

Natural language processing (NLP) is another form of AI that meshes nicely with CRM. By parsing emails and other messages, a CRM can assess urgency and prioritize cases. NLP can also improve the effectiveness of automated responses and even replace customer surveys as the primary tool for gauging customer satisfaction.

The combination of NLP and chatbots promises a further boost in customer engagement through digital channels. In a recent survey by SugarCRM and Flamingo, three-quarters of the respondents said they’re comfortable using chatbots and think they would improve the online experience.

Because as much as 98% of all customer interactions are simple queries of some kind, bots can be immensely valuable for scaling and streamlining engagement, says Greenberg. “You don’t want to be delighted by the answer; you just want the answer,” he says. “That’s the value of AI: the ability to learn without the human on the ordinary stuff.”

Glossary of CRM Terms

As you start on your path to modern, game-changing CRM, it's important to familiarize yourself with commonly used CRM terms and industry definitions. For the complete list, visit our [CRM Glossary](#).

Leary sees tremendous potential for the intersection of voice technology and CRM, with voice-activated assistants such as Siri and Alexa paving the way. "People are interacting with these devices in ways you could not have imagined even a few years ago, and every interaction becomes a data point," he says. "It's going to have a huge impact on customer engagement and the foundation that CRM sits on."

Leary sees additional customer engagement opportunities with other Internet of Things (IoT) devices, such as connected appliances that automatically sense the potential failure of a part and place an order for a replacement without human intervention.

"You're seeing all kinds of use cases with these devices that we've [become] more dependent on, including cars," he says. "That's why CRM is at the heart of a customer engagement strategy, because it becomes the central place where all your customer data resides, regardless of the source."
